

Hello everyone in Rack Land,

VCV-Rack version 1.1.2 is history. And that's a good thing, it has cost many users a lot of time and nerves. Also I had problems with a few modules and even on Linux. And somehow my problem seemed unique, but with the patience and tenacity of Dominique Camus of Ohmer Modules, a solution could be found. In the process, I realized how difficult it is to program software that has to run under different operating systems and in totally different configurations. And we are not talking about multi-million dollar companies and their top products in the high-price sector. VCV rack is still free and just as many products. That, dear people, is not a matter of course. And even the commercial modules cost only a fraction of VST / AU plugins, not to mention hardware. So it is to be taken for granted that every now and then bugs appear. And I have never experienced that it will not respond quickly. That too is not a matter of course.

Today, in the official facebook group was asked why you should buy commercial modules, when there are over 1000 free ones. Apart from the fact that these are usually absolutely unique, it is also a small acknowledgment of the efforts of the developers. Nobody gets rich with it and I think nobody assumes it. But the developers put a lot of time and love into their modules, and that should be honored.

And now to the news.

Developer News and other News

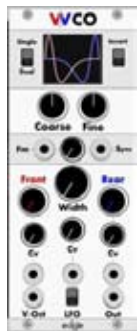

After Rack Version 1.1.2 was sometimes very unstable, version 1.1.3 was released quickly, which restored the usual stability. All previous versions from 0.3.0 to today can be downloaded at <https://vcvrack.com/downloads/>.

Anyone who has 0.6.x still installed, at least as a second version may look forward to, because all Klirrfactory modules for Rack 0.6.x can now be downloaded freely. And those who have not installed it can do so thanks to the link above.

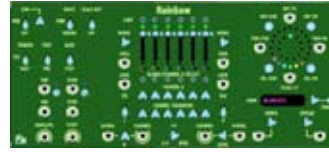

Coirt celebrates 10,000 downloads of its Bark modules with a new design.

Alikins has revised his modules and is now at version 1.0.1.

Since version 1.0.2, the Oscillator supports WCO from Edge polyphony.

Skrylar's Skylights modules have been re-designed to be version 1.0.1.

The Rainbow module from Prism / Amalgamated Harmonics has been re-designed and is now at version 1.0.2.

JW Modules has reworked its modules and is now at version 1.0.7.

After the Drum Kit the Synth Kit by Jerry Sievert got also an update and is now at version 1.0.1.

Robotic Bean has reworked its two commercial modules, Clapper and Tilter, and is now at version 1.0.1. The modules can be purchased via the PluginManager.

Ohmer Modules continuously improves its module Metriks. 2 of the 4 provided modes are now implemented. With version 1.1.3, all Ohmer modules are stable again.

Ohmer Modules for VCV Rack

New Modules

Also this week we are happy about a new entry in the Plugin Manager.

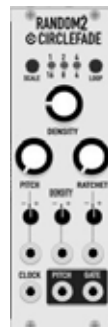

Patch & Tweak is the name of a great book about modular synthesizers. 5 blank modules, some with quotes from the book, can now decorate patches in VCV rack. In addition, there will soon be patches from the book for download.

In the Fundamentals series, VCV released the mid/side module with version 1.1.1, a stereo encoder / decoder.

Meanwhile no week goes by without a new module from the Klirrfactory. New this week is the Distortion Sequencer DISTROY. This is a commercial module and is included in the editions Gold, Platinum, Titanium and Hall of Fame.

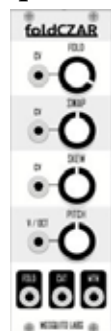

Circlefade adds the Random2 random generator to its module palette in version 1.0.1.

MyLittleTags from the series **MyLittle-Tools** by **digitalhappens** sorts all installed modules according to their tags and thus allows **selection** without the browser module and thus without images.

In version **1.0.3**, **Bidoo** released the compact **Compressor MiniBar**.

Computerscare's modules are now also available for Rack V1. New additions include the Polyphony Utility Modules **Knoly Pobs**, **Boly Puttons**, **Roly Pouter**, **Toly Pools** and **Soly Pequencer**.

Mosquito Labs released with version **1.1.1** another Oscillator with another synthesis. **foldCzar** uses waveshaping techniques to manipulate a triangle wave. The principle is very common especially in West Coast synthesis.

Challenges & Collaborations

Very Cool Patch Challenge

In Edition 36 of the **Very Cool Patch Challenge**, the module to be used is **re-burst** from **repelzen**. Entries can be submitted by **6th August** and a new challenge will start the following day. The contributions are summarized as always in a playlist.

In Edition 35, the module to be used was **Acid** by **RJ Modules**. The contributions are summarized in a **playlist**.
